

Cybersecurity Tips for Business travelers

Provided by: Brady, Chapman, Holland & Associates

Business travelers are **prime targets for cybercriminals**, as they often carry valuable data and may not always be careful about securing their devices. Some common cyberthreats that business travelers may encounter include:

UNSECURED
WI-FI NETWORKS

PUBLICLY
ACCESSIBLE COMPUTERS

STOLEN OR
MISPLACED DEVICES

Neglecting cybersecurity when employees are on the road or abroad can be detrimental to a business. Here are some measures employers can implement to minimize cybersecurity risks for business travelers:

Establish
Wi-Fi policies.

Enforce Virtual
Private Network
(VPN) use.

Require regular
software updates.

Conduct physical
security training for
digital valuables.

Encourage
employees to pack
minimal devices.

Establish
response plans.

Business travelers should take the proper precautions while traveling to help keep their personal and work-related devices and data secure. For more risk management guidance, contact us today.
